Key:

s = singular reading (until all MSS have been collated, this is just an assumption);

c = corrected variant (variation of any kind corrected to the presumed archetype);

x = uncorrected variant ('variant' here means that it is attested by MSS outside the family);

/ = family is divided (a splinter group);

h = an obvious case of homoioteleton (or -arcton), involving a line or more;

i = sheer inattention (usually repeating a syllable from one line to the next);

--- = no departures from the presumed profile.
